

Oklahoma State University Environmental Science Graduate Program

Established in 1977, the Environmental Science Graduate Program at Oklahoma State University prepares students for careers as environmental scientists with the knowledge and skills needed to find practical solutions to complex environmental problems. Our graduates are employed as industry experts, CEOs of consulting firms, tribal environmental program leaders, environmental educators, university professors, and lead scientists at municipal, state, and federal agencies.

The interdisciplinary nature of the program allows students to develop a personalized plan of study to achieve their individual career goals.
